PROFESSIONAL SUMMARY

Master of Statistics who builds data-driven ML solutions to improve business outcomes — experience in demand forecasting for a pharma distributor using regression models and classification/ensemble models for Credit card fraud detection. Proficient in Python, Pandas, scikit-learn, XGBoost and Power BI.

CORE SKILLS

- | | |
|------------------------|-----------------------|
| • Python | • Regression |
| • SQL (MySQL) | • Classification |
| • Pandas | • Feature Engineering |
| • NumPy | • Data Preprocessing |
| • Scikit-learn | • Feature Selection |
| • XGBoost | • Advanced Excel |
| • Seaborn | • Jupyter Notebook |
| • Matplotlib | • PyCharm |
| • BeautifulSoup | • Python Shell |
| • TF-IDF Vectorization | • Google Colab |
| • Tokenization | • Power BI |
| • Stemming | |

PROJECTS

Data Science Intern — Pharma Distributor ML Project

- Developed machine learning models to forecast medicine demand and predict seasonal trends.
- Built customer-wise purchase prediction models to optimize inventory management.
- Implemented stock shortage prediction system to reduce supply chain disruptions.

Machine Learning — Credit Card Fraud Detection

- Performed end-to-end data preprocessing, imbalance handling (SMOTE) and feature engineering on transactional datasets to surface fraud signals.
- Trained and tuned ensemble models (XGBoost, Random Forest) and optimized decision thresholds to improve detection while limiting false positives.
- Evaluated models using precision/recall and AUC metrics; documented reproducible pipelines for deployment readiness.
- Visualized risk patterns and model outcomes using Seaborn and Matplotlib.

EDUCATION

Master of Statistics | Shivaji University, Kolhapur

Bachelor of Statistics | Shivaji University, Kolhapur
